ONBOARDING

HOME / MAP

DISCOVERY

TRANSPARENCY · BOOKMARKS · SHARING

SETTINGS · ERRORS · OFFBOARDING

LEGEND

User: Citizens & visitors

Entry: App launch / icon tap

**DESIGN NOTE**

Onboarding is shown exactly once — local storage flags completion. A 'What is this?' link on the map allows users to revisit the intro without resetting the flag.

User: Citizens & visitors

Entry: Default home screen

Live map loads

City zones shown with current mood labels

User opens mood filter panel

Tap filter chip / filter icon

Select mood chip

Energetic · Intense · Busy · Relaxed · Calm

Map updates

Matching zones highlighted, others dimmed

Matching zones found?

No

Yes

No match — empty state

Suggest nearest mood or check-back time

Zones highlighted

User taps a zone

Exit: area detail panel opens

Flows into Flow 03

DESIGN NOTE

The search bar lets users jump directly to a named district, bypassing the filter. Both paths lead to the same Area Detail panel.

User: Citizens & visitors

Entry: Tap zone on live map

Area detail panel slides up

Zone name, mood label, confidence %

Mood label displayed

Colour-coded, with confidence badge

User reviews mood & event count

Scan headline info

Vibe matches intent?

No

Yes

No — return to map

Dismiss panel, try another zone

Yes — explore further

Continue to events or share

Choose next action

Events · Transparency · Bookmark · Share

Exit: navigate or bookmark area

Flows into 04 / 05 / 06

DESIGN NOTE

The 'How was this calculated?' link sits directly beneath the mood label — always visible, never hidden in a menu. Confidence shown as a plain-language note alongside the percentage.

User: Citizens & visitors

Entry: Area detail panel

**DESIGN NOTE**

When a live API is slow the app always shows a stale-data banner with a 'last updated' timestamp — never a silent blank feed. The filter panel slides up from the bottom on mobile.

User: Researchers & stakeholders

Entry: 'How was this calculated?' link

Area detail panel open

Mood label visible with confidence %

Tap 'How was this calculated?'

Persistent link beneath mood label

Transparency panel opens

Input signals, factor weights, confidence %

Explanation data loaded?

No

Error — unavailable

'Explanation unavailable' + retry

Yes

Data displayed

Signals · Weight chart · Plain-language note

Optionally tap 'Export JSON'

Download raw explanation payload

Exit: close panel or share snapshot

Return to area detail

DESIGN NOTE

The trigger link is always visible beneath the mood label, never behind a menu. Factor weights are shown as a visual bar chart. If data fails to load, the panel explicitly says so with a retry option.

User: Citizens & visitors

Entry: Area detail panel

**DESIGN NOTE**

Bookmarking uses local browser storage — no login required. The shared URL encodes mood label and timestamp so recipients see the same context the sender saw. Deep-link returns open directly to that area.

User: All users

Entry: Settings icon on map header

Settings screen opens

Accessible from live map header icon

Notification preferences

Opt in to mood-change alerts for saved areas

Language / region

UI language preference

Manage bookmarks

View, rename, or delete saved areas

About & help

App version, data sources, 'What is this?'

Clear all local data

Deletes bookmarks, resets onboarding flag

Exit: return to live map

Settings applied immediately

DESIGN NOTE

Clearing all local data resets the app to first-visit state — onboarding shows again on next open. This is the app's offboarding equivalent. No server-side account exists.

User: All users

Entry: Triggered automatically

No mood zones match filter

Suggest nearest available mood or check-back time

**No events in area**

Suggest active areas nearby; never a blank feed

**API stale data**

Stale-data banner + 'last updated' timestamp always shown

**Explanation unavailable**

Transparency panel shows explicit error + retry

**Share failed**

Copy-link fallback shown automatically, no dead end

**All error states offer a next step**

No branch is a dead end — always constructive

DESIGN NOTE

Error states are first-class screens. Every failure mode has a specific recovery path. Designers must prototype all five error states before sign-off.

Core UX principles

- Transparency is never buried

The 'How was this calculated?' link is always visible beneath the mood label.
- Error states are not dead ends

Every 'No' branch offers a constructive next step — never a blank screen.
- Live map is the anchor

All flows return to the map as exit. Panels are overlays.
- No login for core value

Bookmarking uses local storage; sharing uses Web Share API with a fallback.
- Stale data is always surfaced

API delays show a banner with timestamp — never a silent blank feed.
- Mobile-first panels

Panels slide up on mobile; right-side drawer on desktop.
